a
Does support depend on where body size enters?
Eight hypotheses, one representative of each distinct equivalence class.
All species (n = 24)
Without aeneus + wrighti (n = 22)
H5 Cell linked to SVL
H7 Genome linked to SVL
H1 SVL upstream: cell bridge
H8 SVL independent
H3 SVL upstream: genome fork
H2 SVL upstream: nucleus bridge
H6 Nucleus–cell–SVL chain
H4 SVL-only fork

ΔCICc within species panel and test order
Primary test order
Reverse test order
Dashed line: ΔCICc = 2. Test order changes response choice for pairs without a directed path.
Candidate arrows are hypotheses; rankings do not identify the direction of causation.
