b
Support among four SVL-adjusted hypotheses
Every candidate includes SVL → genome size, cell area and nucleus area.
All species (n = 24)
Without aeneus + wrighti (n = 22)

ΔCICc within each species panel
Global-fit test
P < 0.05
P ≥ 0.05
Dashed line: ΔCICc = 2. Weights compare only these four candidates within each panel.
Exclusion is a sensitivity analysis; body size and development mode differ together.
