c
Path strengths and the remaining genome–nucleus association
Upper rows: paths in the genome-first hypothesis. Lower rows: conditional comparisons.
β [95% interval]
Genome → cell
0.72 [0.43, 1.01]
Cell → nucleus
0.58 [0.24, 0.92]
Genome → nucleus
(adjusted for cell area)
0.01 [-0.49, 0.51]
Genome → cell
(adjusted for nucleus area)
0.57 [0.28, 0.87]
-0.5
0.0
0.5
1.0
Standardized coefficient, β
Intervals: estimate ± 1.96 SE. The adjusted genome–nucleus estimate is near zero, with substantial uncertainty.
